SKILLS

PROGRAMMING

Go • Bash / Zsh • Git • Python • Javascript • React.js

INTERESTS

Reading • Writing •Hackathons •Open Source Work •Public Speaking

SPOKEN LANGUAGES

English • Russian

SUMMARY

I am currently focused on building **Learn Anything** which is an **Open Source** website to organise world's knowledge with study plans for learning anything.

I am looking for work opportunities in backend or mobile development.

I am free to relocate to any place and I have EU nationality.

PROJECTS

LEARN-ANYTHING.XYZ | Search Interactive Mind Maps to Learn Anything
January 2017 -

- An Open Source Source Website that searches through User Curated Interactive Mind Maps to Learn Any Topic on Earth in the most efficient way possible
- The goal is to visualise all of world's knowledge and accelerate learning
- The Website can be seen live **here** and code can be found on **GitHub**. It received great feedback and is growing every day and the main GitHub repository has over 7000 stars and growing
- It was built using React.js, Javascript, Redux, Webpack and Elasticsearch

ALFRED WORKFLOWS
I have written a few Alfred Workflows in Go focusing on Productivity :

- ◇ **Web Searches** : Search through any website on the web through Alfred

- ◇ **Alfred My Mind** : Alfred workflow that searches through my notes and bookmarks on the web

EXPERIENCE

HACKATHONS
I love attending and organising hackathons to both meet new people and to try out solving interesting problems in a short amount of time.

In the recent hackathons I attended I have built :

- ◇ A small web application that did sentiment analysis on a stream of incoming tweets

- ◇ Browser plugin that allowed users to process payments on Amazon using Ethereum.
